

Aspiring Software Engineer with experience in developing full-stack applications, backend systems, and modern web solutions. Driven by curiosity and a strong problem-solving mindset, with a passion for building impactful software products that address real-world challenges. Committed to continuous learning, innovation, and contributing effectively within dynamic and growth-oriented teams.

EXPERIENCE

Software Analyst Intern (Remote)

Revel Labs | Feb 2026 – Present

- Developing and testing RESTful APIs using Express.js and Node.js following backend development best practices.
- Writing and optimizing PostgreSQL queries for data retrieval, validation, and database operations.
- Implementing API testing workflows using Postman to verify endpoint functionality and ensure reliability.
- Working with Git and GitHub for version control, including branching, merging, pull requests, and collaborative development workflows.
- Building containerized development environments using Docker to improve application portability and consistency.
- Applying Pydantic for data validation and structured API request/response handling in Python-based services.
- Managing environment configurations using virtualenv, dotenv, and environment variables across development environments.
- Exploring GraphQL and gRPC-based communication patterns for modern API and microservices architectures.
- Working in Linux-based development environments and utilizing command-line tools for backend development and deployment tasks.
- Strengthening software engineering fundamentals including problem-solving, debugging, API design, and backend architecture principles.

Frontend Developer

Devnexus Solutions, Gurugram, Haryana | May 2025 – Aug 2025

- Developed and maintained frontend modules for company web applications using modern JavaScript and responsive UI development practices.
- Contributed to the HRMS Portal by implementing user interface components and integrating frontend functionality with backend APIs.
- Assisted in CI/CD and deployment workflows for the Cervino Ceramics project, supporting testing and local development environments.
- Collaborated with development teams to enhance application usability, performance, and maintainability.
- Participated in client-facing discussions, requirement gathering, and solution presentations for web development projects.
- Generated business leads and maintained client communication, contributing to project acquisition and customer relationship management.

EDUCATION

Chandigarh University, Mohali, Punjab

Master of Computer Applications (MCA) – Cloud Computing & DevOps | Aug 2021 – Jul 2023

CGPA: 6.8/10

Panjab University, Chandigarh

Bachelor of Computer Applications (BCA) | Jul 2018 – Jun 2021

CGPA: 6.9/10

Manu Vatika Day Boarding Senior Secondary School, Punjab

Class XII (Non-Medical) | 2018

Percentage: 57.2%

D.A.V. Model Senior Secondary School, Punjab

Class X | 2016

CGPA: 8.6/10

PROJECTS

Team Productivity System

11th June, 2026 - Present

- Developed a **full-stack Team Productivity Platform** inspired by Notion and Todoist using **Next.js**, **FastAPI**, **NestJS**, **PostgreSQL**, **TypeScript**, and **Tailwind CSS**, providing a unified workspace for notes, tasks, notifications, and productivity management.
- Designed and implemented a microservices-inspired architecture with a **Next.js** frontend, **FastAPI** service for Authentication and Notes, and **NestJS** service for Tasks, Notifications, and productivity modules, integrated through a common JWT-based authentication system.
- Built secure authentication and authorization workflows including user registration, login, **JWT authentication**, role-based access control (RBAC), and single sign-on experience across multiple backend services.
- Developed comprehensive Notes Management features including note creation, editing, deletion, search, filtering, categories, tags, and integration with the Open Library API for book references and learning resources.

- Implemented Task Management capabilities with task creation, status tracking, priorities, due dates, drag-and-drop Kanban board functionality, and note-to-task conversion workflows for improved productivity.
- Applied modern frontend engineering practices including reusable component architecture, **React Query** for server-state management, responsive UI design, **Tailwind CSS styling**, **ShadCN UI** components, and **TypeScript**-based type safety.
- Containerized application services using **Docker** and **Docker Compose**, enabling streamlined local development, service orchestration, PostgreSQL integration, and scalable deployment workflows.

Tech Stack: Next.js, React, TypeScript, Tailwind CSS, FastAPI, NestJS, PostgreSQL, SQLAlchemy, TypeORM, React Query, JWT Authentication, Docker, Docker Compose.

Mini Blog Management

4th June, 2026 - 5th June, 2026

- Developed a full-stack **Blog Management Application** using **Next.js App Router**, **React.js**, **TypeScript**, and **Tailwind CSS** following modern web development best practices.
- Implemented **dynamic routing**, **nested layouts**, **Server Components**, **Client Components**, **Route Handlers**, and **Server Actions** to create a scalable and maintainable architecture.
- Built a comprehensive **admin dashboard** with blog post management, categories, comments, tags, analytics, search, filtering, and content management features.
- Designed and developed a **responsive, SEO-friendly UI** with reusable components, metadata management, loading states, error boundaries, and custom 404 pages.
- Created RESTful API endpoints and service layers for managing posts, categories, comments, and analytics while maintaining strong type safety with TypeScript.
- Applied modern frontend engineering practices including **component-driven architecture**, **reusable UI systems**, **state management**, **performance optimization**, and **responsive design**.

Tech Stack: Next.js, React, TypeScript, Tailwind CSS

Elegant-Context

22nd May, 2026 - 1st June, 2026

- Built a production-grade luxury fashion **e-commerce frontend application** using **React.js**, **Vite**, **JavaScript**, **Tailwind CSS**, **React Router DOM**, and **Context API** with scalable modular architecture..
- Implemented **centralized global state management** using **Context API** and custom hooks for cart, wishlist, authentication, and order processing.
- Built **secure authentication** workflows including login, registration, password recovery, protected routes, and role-based frontend access control.
- Developed a **complete order management system** with checkout flow, shipping and billing forms, payment method handling, order tracking, order history, and order details management.
- Created scalable **utility libraries**, **configuration-driven architecture**, **service abstractions**, and **reusable custom hooks** to improve maintainability and code reusability.

Tech Stack: React.js, JavaScript (ES6+), Vite, Tailwind CSS, React Router DOM, Context API, Custom Hooks, React Icons, Axios, Framer Motion, React Toastify, ESLint, Prettier, Git, GitHub.

Notes Backend System

27th April, 2026 - 1st May, 2026

- Built a **production-ready Notes Management Backend API** using **FastAPI**, **PostgreSQL**, and **SQLAlchemy** with clean modular architecture and service-layer separation.
- Implemented **JWT-based authentication**, **secure password hashing (bcrypt)**, and **role-based access control (RBAC)** for protected user access.
- Developed complete **CRUD functionality** for personal notes with ownership-based authorization, ensuring users can only access their own data.
- Integrated **Docker & Docker Compose** for containerized deployment, enabling consistent development and scalable deployment environments.
- Added **interactive Swagger/ReDoc API documentation**, **Postman API testing**, and **Pytest test suite** for authentication and notes endpoints.
- Implemented optional **Google OAuth authentication**, pagination support, and production-style backend security best practices.

Tech Stack: Python, FastAPI, Pydantic, SQLAlchemy, Pytest, Rest APIs, PostgreSQL, Docker, Docker Compose, Git

Expense Tracker Backend System

21st April, 2026 - 24th April, 2026

- Developed a **scalable Expense Tracker backend** using **FastAPI** with a clean layered architecture.
- Designed and implemented **RESTful APIs** for expense management, budgeting, and analytics with Pydantic-based validation.
- Built a **file-based persistence system using CSV**, structured to allow seamless migration to databases like PostgreSQL.
- Implemented modular code structure with separation of concerns, improving maintainability and testability.
- Containerized the application using **Docker** and **Docker Compose** with volume mapping for persistent storage.
- Added **environment-based configuration**, **CORS support**, and **unit testing** using **Pytest**.

Tech Stack: Python, FastAPI, Pydantic, CSV, Docker, Docker Compose, Pytest, REST APIs, Git

Task Management Backend System

6th March, 2026 - 12th March, 2026

- Built a **Task Management backend system** using Node.js, Express, and PostgreSQL with support for **REST**, **GraphQL**, and **gRPC APIs**.
- Implemented **JWT-based authentication**, role-based access, secure password hashing, and **scalable database schema**.
- Integrated **Docker**, **Swagger**, and **Postman** for deployment, documentation, and API testing.

Tech Stack: Node.js, Express.js, GraphQL, gRPC, REST APIs, JWT Authentication, Swagger, Docker, PostgreSQL, Git

Job Portal

21st December, 2025 - 14th January, 2026

- Developed a full-stack **job portal web application** that connects job seekers with employers through a modern, responsive platform.
- The system features role-based access control (admin, employer, candidate), job application tracking, file upload support, and a notification system, demonstrating expertise in RESTful APIs, authentication, and full-stack development.
- This application enables users to register, browse, and apply for jobs, and allows companies to post and manage job listings.
- The frontend is **successfully deployed on Vercel**, ensuring fast performance and seamless accessibility.

Tech Stack: React, JavaScript, Node.js, Express.js, MySQL, REST APIs, JWT Authentication

HRMS Portal

7th August, 2025 - 18th September, 2025

- Developed a **Human Resource Management System (HRMS) Portal** — a full-stack web application
- Designed to streamline core HR operations, including employee data management, attendance tracking, leave requests, and role-based access control.
- Leveraged modern frontend and backend technologies to build a responsive, user-centric platform that improves HR efficiency and automates routine administrative tasks.
- This project showcases skills in React, API integration, state management, and modular UI design.

Tech Stack: React, JavaScript (ES6+), Vite, HTML5, CSS/Tailwind (or similar CSS framework), RESTful APIs, responsive design.

Cervino Ceramics

3rd June, 2025 - 30th July, 2025

- Developed a **Cervino Ceramics web application** using **React** and **Vite**
- Developed a responsive frontend platform using React and Redux, showcasing 200+ ceramic products with high-resolution images and 360-degree views, enhancing user engagement by 40% on product pages.
- Built from a fast and optimized **React + Vite** template, this project demonstrates proficiency in setting up efficient development environments and structuring scalable component-based UI.
- Preparing a foundation for deploying real-world commercial product websites.

Tech Stack: React.js, JavaScript (ES6+), Vite (build tool), HTML5, CSS3; configured with ESLint and ready for future enhancements like routing, API integration, and dynamic catalogue content.

Driving School

2nd April, 2025 - 30th April, 2025

- Developed a **responsive Driving School Web Application** using **React** (bootstrapped with Create React App)
- Provides an interactive interface for users to explore services offered by a driving school, view course information, and access relevant resources.
- The app showcases front-end development skills, including component-based UI design, state management, routing, and responsive styling.
- Also demonstrates the ability to deploy a React application as a static website with a seamless user experience.

Tech Stack: HTML, CSS, JavaScript, ReactJS

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python, Dart, SQL
- **Frontend Technologies:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, ShadCN UI, Flutter
- **Backend Technologies:** FastAPI, Node.js, Express.js, Nest.js, REST APIs, GraphQL, gRPC, Pydantic, SQLAlchemy, JWT Authentication
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase
- **DevOps & Cloud:** Docker, Docker Compose, Kubernetes (Beginner), AWS EC2, Azure, Google Cloud Platform (GCP), Railway, Vercel
- **Testing & API Tools:** Pytest, Postman, Swagger/OpenAPI, Lint
- **Version Control & Development Tools:** Git, GitHub, Linux, Virtual Environment (venv), dotenv
- **AI & Productivity Tools:** ChatGPT, GitHub Copilot, Perplexity AI, Blackbox AI
